

what is Markdown?

It's a way to write text using simple symbols (like ****** for bold or **#** for headings) so it can be easily turned into nicely formatted web pages.

what is Git?

Git is a free tool that helps track and manage changes to files in a project, so you can see history, work with others, and keep everything organized.

what is Github?

GitHub is an online platform that works with Git, where developers can store, share, and work together on code in real time, making team projects and open-source development easier.

what is Slack

Slack is an app where teams can chat, share files, and work together in organized channels or private messages, keeping all communication and project info in one spot.
